Agile testing is a relatively new approach to software testing that follows the principles of agile software development as outlined in the Agile Manifesto.

A tester on an Agile project will work differently than one working on a traditional project. Testers must understand the values and principles that underpin Agile projects, and how testers are an integral part of a whole-team approach together with developers and business representatives.

There is a lot of confusion concerning agile testing – which means there’s an educational opportunity as well. The **Agile Tester** will give the tester the knowledge to be part of agile testing teams and achieve high performance.

To be eligible to undertake the Agile Tester Foundation certification exam, candidates must first hold the ISTQB® Foundation Certificate.
